Adobe University Recruiting
Software Engineer, University Graduate
Expected graduation: May 2027

Dear Adobe Recruiting Team,

I am applying for the Software Engineer, University Graduate role. I will complete a B.S. in Computer Science with a minor in Visual Arts at the University of Texas at Dallas in May 2027 (GPA 3.5). I want to build the systems behind products people use to create—not only write features, but understand how a decision in code shows up in the interface a designer or customer actually touches.

Design is why Adobe is the company I keep coming back to. I have spent as much time in Figma as in an editor: shaping visual hierarchy, reusable components, and the handoff between a mock and production. ThirdSpaceDigital is the clearest example. I designed the community platform and built it end-to-end in JavaScript and React, from prototypes through deployment. It reached 300 users in the first week. Tactile went further into the tool itself: a Figma plugin that turns live hand tracking into design actions at roughly 60 frames per second. I rebuilt the interaction model four times, with AI-assisted tools for speed and my own judgment for correctness. That is the kind of craft I want to bring to Creative Cloud, Firefly, Express, and platforms like Adobe Experience Manager—software that has to feel inevitable, and still be reliable at scale.

The engineering underneath that craft is already how I work. At Vinson Process Controls I owned an end-to-end monitoring product across design, coding, code review, testing, debugging, deployment, and documentation. A workflow I shipped improved operator efficiency by 1200%. At Codeaify I wrote Python services and a JavaScript UI for guardrails and PII encryption, raised automated coverage to 95%, and treated code review as part of quality, not a formality. My foundation is data structures and algorithms in Java, Python, C++, and JavaScript, and I use Copilot, Cursor, and Claude to move faster without handing them the decision.

I collaborate well with designers and product partners because I have been both. I would be glad to join a team where technical choices are judged by what the user can do next. Thank you for your time. My work is at studiorain.xyz.

Sincerely,
Prabhas Gade
