Education

University of Texas at Dallas May 2027
B.S. Computer Science, Minor in Visual Arts; GPA: 3.5; Academic Excellence Scholarship *Richardson, TX*

- **Coursework:** Data Structures & Algorithms in Java, Python, C++, and JavaScript; Software Engineering; Human–Computer Interaction; Databases; Operating Systems

Experience

Vinson Process Controls May–Aug. 2025; May–Aug. 2026
Software Engineering Intern *Richardson, TX*

- Engineered an end-to-end JavaScript/React and Node.js monitoring workflow on AWS that surfaces equipment issues in real time, replacing manual status checks that previously let downtime reach operators unnoticed.
- Shipped a shortcut-overview system that collapsed routine device controls into fewer interactions, improving operator efficiency by **1200%** and cutting labor spent on repeat reviews across two internship terms.
- Standardized Agile CI/CD and Docker delivery with code review from design through testing, debugging, deployment, and documentation, reducing environment drift and the cost of broken releases.

ThirdSpaceDigital Jan. 2026 – Present
Software Engineer & Product Designer *Dallas, TX*

- Designed and shipped an end-to-end JavaScript/React and Supabase publishing platform with designers, replacing scattered third-party tooling and attracting **300** users in week one with roughly **55** daily visits sustained for months.
- Standardized reusable components, visual patterns, and usage documentation so article, event, issue, and archive surfaces stayed consistent and new pages stopped requiring one-off rebuilds.

Codeaify Jun.–Aug. 2024
Software Engineering Intern *Dallas, TX*

- Engineered Python services and a JavaScript UI for LLM guardrails and PII encryption on PostgreSQL and DynamoDB, replacing scattered manual handling of sensitive client data.
- Raised automated test coverage to **95%** through code review and debugging, improving AI-engine compliance by **20%** and cutting defects that escaped into client environments.

JPMorgan Chase Jun.–Aug. 2023
Software Engineering Intern *Houston, TX*

- Built a JavaScript reporting view over Cassandra transaction and cluster metrics that **doubled** actionable insight and replaced repetitive manual analysis for operations teams.
- Presented findings to **15+** project managers (**98%** rating), translating performance risks into decisions before they escalated into costly incidents.

Projects

Tactile | *JavaScript, Python, Figma Plugin API, FastAPI, WebSockets* Jan. 2026

- Engineered an end-to-end Figma plugin that streams roughly **60 FPS** hand tracking into design actions, so designers can move and edit frames without a mouse or extra hardware.
- Debugged four architecture iterations until false gesture triggers stopped interrupting the live workflow; used Copilot, Cursor, and Claude to prototype faster while keeping correctness in review.

T-Moodbile | *JavaScript, Python, Node.js, PostgreSQL, Gemini* Nov. 2025

- Shipped an end-to-end sentiment platform that checks customer mood every five minutes against a **70%** threshold and sends deduplicated alerts, flagging decline before preventable churn.

Technical Skills

Languages: Java, Python, C++, JavaScript, TypeScript, SQL, Node.js
Engineering: data structures, algorithms, end-to-end development, code review, testing, debugging, deployment, documentation, Agile
Tools & Platforms: Git/GitHub, Docker, CI/CD, AWS, React, Figma, AI-assisted development (Copilot, Cursor, Claude); interested in Adobe Experience Manager, Creative Cloud, and Experience Platform
