Lowe's Technology Recruiting
Software Engineer Intern – Innovate in Charlotte
Summer Internship Program (May 24 – July 30, 2027)

Dear Lowe's Recruiting Team,

I am applying to the Software Engineer Intern role at Lowe's Tech Hub in Charlotte because I want to build scalable, customer-focused software in a Fortune-scale retail environment—and grow toward Lowe's Launchpad after graduation. I am pursuing a B.S. in Computer Science at the University of Texas at Dallas (GPA 3.5; expected May 2028), which aligns with your December 2027 / May 2028 graduation window.

Across internships and product work, I have practiced the same skills this internship emphasizes: Agile delivery, clean full-stack coding, testing, code reviews, and CI/CD. At Vinson Process Controls, I developed React/Node.js features with REST and MySQL for real-time associate-facing monitoring, improved a workflow by 1200%, and contributed to GitHub-based pipelines and Dockerized deployment. At ThirdSpaceDigital, I partnered on UX and product decisions to ship an intuitive React experience that reached 300 users in its first week. At Codeaify and JPMorgan Chase, I strengthened Python/JavaScript development, automated testing, data visualization, and clear communication with stakeholders.

I am especially excited by Innovate in Charlotte's mix of hands-on engineering and enterprise SDLC—working with UX, product, and data partners to deliver reliable systems that serve millions of customer transactions. I bring Java, Python, JavaScript/React, C#/.NET familiarity, GCP exposure, and a track record of collaborative leadership through CSHaven and Coding for Medicine. Thank you for your consideration. I would welcome the chance to contribute fresh perspective, strong teamwork, and production-minded engineering to Lowe's this summer.

Sincerely,
Prabhas Gade
