Southwest Airlines Technology Recruiting
Associate Software Engineer – Direct College Hire Program
Cohorts beginning January, June, and August 2027

Dear Southwest Airlines Recruiting Team,

I am applying for the Associate Software Engineer role in Southwest's Technology Direct College Hire Program. I will complete a B.S. in Computer Science at the University of Texas at Dallas in May 2027 (GPA 3.5) and am most interested in the June or August 2027 cohort. I can work remotely from Texas, and I want to build reliable software that Customers and Employees depend on every day.

What draws me to Southwest is the same standard I try to meet in my own work: systems that stay calm under pressure. Airlines run on trust—a delayed schedule, a broken booking flow, or a missed alert becomes a real person's problem. I want to grow as an engineer on teams where careful delivery and clear communication matter as much as shipping features.

At Vinson Process Controls, serverless edge computing was central to my role. I built AWS services and Node.js APIs, connected a JavaScript/React interface, and shipped through CI/CD so operators could monitor equipment in real time. A shortcut workflow I delivered improved user efficiency by 1200%. At Codeaify, I developed Python APIs with DynamoDB and PostgreSQL for guardrails and PII encryption, and I expanded test automation to 95% coverage. At JPMorgan Chase, I troubleshot production data issues and walked 15+ stakeholders through a React solution they could act on.

I am comfortable across Java, Python, JavaScript, C#, and Node.js, and I have used microservices, REST APIs, serverless AWS, and DynamoDB on real products. I have also shipped nonprofit software for students facing food insecurity and used Generative AI with review, not blind trust. I would welcome a team in Air Operations, Digital & Customer, Workforce, or AI platforms where that mix of technical judgment and people-first impact fits.

Thank you for your time. I would be glad to contribute to technology Southwest can rely on.

Sincerely,
Prabhas Gade
