Southwest Airlines Technology Recruiting
Associate Cloud DevOps Engineer – Direct College Hire Program
Business of IT Platforms Team
Cohorts beginning January, June, and August 2027

Dear Southwest Airlines Recruiting Team,

I am applying for the Associate Cloud DevOps Engineer role in Southwest's Technology Direct College Hire Program. I will complete a B.S. in Computer Science at the University of Texas at Dallas in May 2027 (GPA 3.5) and am most interested in the June or August 2027 cohort. I can work remotely from Texas. I want to support the platforms and automation that help engineers ship safely and consistently.

What draws me to Business of IT Platforms is the work behind the work: version control, CI/CD, quality gates, artifact repositories, and cloud infrastructure that make delivery trustworthy. Airlines run on systems that have to stay up; DevOps is where that reliability is built. I am excited to help bring standard tooling and AI-assisted development capabilities to teams across Southwest—not as novelty, but as safer, faster defaults.

At Vinson Process Controls, delivery automation was part of the job. I containerized serverless AWS services with Docker, automated releases through CI/CD, and reduced environment drift and broken-release cost across two internship terms. A monitoring workflow I helped ship improved operator efficiency by 1200%. At Codeaify, I built Python APIs on DynamoDB and PostgreSQL and raised automated test coverage to 95% so defects were caught before deploy. At JPMorgan Chase, I debugged production data issues and explained a monitoring solution to 15+ stakeholders.

I work comfortably in Node.js, Java, JavaScript, C#, and Python, and I have used AWS (Lambda, S3, DynamoDB), CI/CD, Jenkins, Git, Docker, infrastructure-as-code concepts, and Generative AI with human review. I learn new platform tools quickly and treat internal engineers as Customers who need clear paths to production. I would welcome growing on this team—learning design reviews, business continuity, and disaster-recovery practices with a mentor.

Thank you for your time. I would be glad to help Southwest engineers work more efficiently while keeping engineering standards high.

Sincerely,
Prabhas Gade
