Education

University of Texas at Dallas May 2027
B.S. Computer Science, Minor in Visual Arts; GPA: 3.5; Academic Excellence Scholarship *Richardson, TX*

- **Coursework:** Software Engineering, Operating Systems, Linux/Unix, Database Systems, Computer Networks, Data Structures & Algorithms

Experience

Vinson Process Controls May–Aug. 2025; May–Aug. 2026
Software Engineering Intern *Richardson, TX*

- Containerized serverless AWS services with Docker and automated releases through CI/CD, cutting environment drift and broken-release cost across two internship terms.
- Built and maintained cloud-backed edge monitoring so equipment issues surfaced before downtime; a React/Node.js shortcut workflow improved operator efficiency by **1200%**.
- Met with stakeholders to gather requirements, then ran acceptance checks before promote-to-production so releases stayed functionally sound and well integrated.

Codeaify Jun.–Aug. 2024
Software Engineering Intern *Dallas, TX*

- Developed Python APIs against PostgreSQL and DynamoDB for LLM guardrails and PII encryption, replacing scattered manual handling of sensitive customer data.
- Raised automated test coverage to **95%** as a pre-deploy quality gate, improving compliance by **20%** and reducing defects that escaped to client environments.
- Wrote deploy and verification notes so subsequent engineers could reproduce builds without guessing pipeline steps.

JPMorgan Chase Jun.–Aug. 2023
Software Engineering Intern *Houston, TX*

- Debugged Cassandra cluster and transaction data issues, then shipped a React monitoring view that **doubled** actionable insight for operations teams.
- Walked **15+** project managers through the tool (**98%** rating), translating technical findings into decisions that reduced escalation risk.

UTD EPICS Comet Cupboard Jan.–May 2024
Software Engineering Developer *Richardson, TX*

- Replatformed a nonprofit food-assistance app to React and PostgreSQL, cutting query times by **60%** during peak service demand.
- Standardized Docker packaging and delivery steps, reducing environment-specific failures and new-developer onboarding time.

Projects

T-Moodbile | *Node.js, AWS, CI/CD, PostgreSQL, Gemini* Nov. 2025

- Shipped a customer-sentiment platform with AI voice surveys and social/search ingestion so support teams could see customer mood without manual spreadsheet analysis.
- Automated scheduled jobs, monitoring, and deduplicated alerts at a **70%** threshold; reviewed Generative AI outputs before acting on churn risk.

Tactile | *React, FastAPI, WebSockets, Git, MongoDB* Jan. 2026

- Built a Figma plugin that maps live hand gestures to design actions, streaming roughly **60 FPS** events through FastAPI services tracked in Git.
- Hardened the service path across four architecture iterations with threshold tests so false triggers stopped interrupting the live workflow.

Technical Skills

Languages: Node.js, Java, JavaScript, C#, Python, YAML, SQL
Cloud: AWS (Lambda, S3, DynamoDB), Serverless, infrastructure-as-code (IaC), CloudFormation
DevOps: CI/CD, Jenkins, Git/GitHub, Docker, test automation, Agile, Generative AI, API development, system integration
