Education

University of Texas at Dallas May 2028
B.S. Computer Science, Minor in Visual Arts; GPA: 3.5; Academic Excellence Scholarship *Richardson, TX*

- **Coursework:** Software Engineering, Operating Systems, Linux/Unix, Database Systems, Data Structures & Algorithms, Computer Networks

Experience

Vinson Process Controls (Emerson Impact Partner) May–Aug. 2025; May–Aug. 2026
Software Engineering Intern — process automation *Richardson, TX*

- Built React/Node.js tools and diagnostics for an edge-computing RTU (REST, MySQL) that streamline software troubleshooting by surfacing equipment faults before downtime across two internship terms.
- Improved operator efficiency by **1200%** with a shortcut-overview that applied technology to business problems in day-to-day monitoring; refined user experience so status and controls took fewer interactions.
- Automated release packaging with Docker and CI/CD in an Agile team, cutting environment drift and the cost of broken handoffs during investigations and deploy cycles.

Codeaify Jun.–Aug. 2024
Software Engineering Intern *Dallas, TX*

- Applied technology to business problems by building Python/FastAPI services and a React UI for LLM guardrails and PII encryption on PostgreSQL and DynamoDB, replacing scattered manual handling of client data.
- Drove software troubleshooting and problem solving with automated tests to **95%** coverage, improving compliance by **20%** and cutting defects that escaped into client environments.

JPMorgan Chase Jun.–Aug. 2023
Software Engineering Intern *Houston, TX*

- Debugged Cassandra transaction and cluster metrics, then shipped a React reporting view that **doubled** actionable insight versus repetitive manual analysis.
- Presented reporting findings to **15+** project managers (**98%** rating), turning investigation results into decisions before performance risks escalated.

ThirdSpaceDigital Jan. 2026 – Present
Software Engineer & Product Designer *Dallas, TX*

- Drove business growth with an end-to-end React/Supabase publishing platform: **300** users in week one and roughly **55** daily visits sustained for months; iterated user experience after launch.

Projects

T-Moodbile | *Node.js, Python, PostgreSQL, Gemini* Nov. 2025

- Built process automation for customer-sentiment investigations: five-minute checks against a **70%** threshold, deduplicated alerts, and reporting that flags decline before preventable churn.

Tactile | *React, FastAPI, WebSockets, MediaPipe* Jan. 2026

- Applied problem solving across four architecture iterations of a Figma plugin that streams roughly **60 FPS** gesture events, debugging false triggers until the live workflow stayed stable.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, SQL, C++, Node.js
Engineering: process automation, software troubleshooting, diagnostics & utilities, reporting, problem solving, efficiency, user experience, technology to business problems, business growth
Tools: Docker, CI/CD, Agile, Git/GitHub, AWS, React, MySQL, PostgreSQL, Linux/Unix
